France
Specialist in Aesthetic Dentistry
- May 2016 – present:** Ardara Dental
Front Street
Ardara
Co Donegal
Ireland
Practice Owner specializing in Cosmetic and Digital Dentistry

Dr Morrison started in General Dental Practice in Perth, Scotland in 1990. He purchased his first practice in Northern Ireland in 1994 which at the time was a part time business. He built the practice to a 2 dentist, 1 hygienist practice in 2 years then became the fastest dental practice to convert to private dental care (Denplan) in the UK. He then took his practice through Denplan Excel accreditation. He sold this practice in 2006 having been offered the opportunity to work with Team Atlanta in Atlanta, GA, USA.

Here he experienced the use of state of the art technology in relation to Dentistry. Working closely with Dr Ronald Goldstein, Dr David Garber, Dr Maurice Salama and Dr Christian Coachman in their office in Atlanta, where all the facilities to clinicians and ceramists were at the cutting edge of Dentistry, he became aware of the use and importance of the latest technologies to assist in and ensure excellence in patient care. In 2016, after working in France for 7 years in a dedicated implant restorative practice, he returned to Ireland to open and develop a practice that was dedicated to being at the forefront of dental technology and to employ the very latest techniques in digital Dentistry. His practice was built from the ground up and was awarded "Best New Practice in Ireland" in 2017 at the Irish Dentistry Awards one year after opening. Dr Morrison's practice now employs 2 dentists, one consultant Orthodontist and one hygienist with 6 ancillary staff and has plans to expand to a 4 clinician, 2 hygienist practice in the near future.

The practice was fully digitized in 2020 and now produces the majority of restorations in house with the use of digital scanners and 3D printing technology. This has revolutionized daily workflows and vastly increased the standard of care provided.

Dr Morrison's experience in the development of dental practices with the associated challenges of design, marketing and financial management is leading him to form a dental practice consultancy in the near future with a colleague that is highly qualified in both dental business and dental practice management.

Digital Dentistry and in particular dental 3D printing has been the most significant step forward in Dentistry and general dental practice he has witnessed in over 30 years in the profession.
